

ELUNA learns Emerging Technologies Session Q & A

When using the AI tool to update catalog records are you able to insert the AI enhancements into the Marc records for en reloading?

I don't know what the attendee means by "en reloading".

Who did you say to reach out to about AI panels for June Conference?

Laura Morse: This is a call for a volunteer to lead a Special Interest Group. Work is mainly moderating the listserv and then asking for meeting space at the annual meeting. A call for presentations for the Annual Meeting will be sent out soon (which may be what you meant by panels).

Do you know of any way we can validate or update LC classifications in the catalog? or your code covers all metadata fields?

My validation program does not cover all metadata fields. We rarely use LC classifications in our records (we use NLM Classification) but it would be possible to validate them with the right information.

What is the name of the private AI tool used by NLM?

Microsoft Azure AI

Would you be willing to share the text of your successful prompts?

Yes, I have shared with multiple attendees through email. Please send me a message at alvin.stockdale@nih.gov and I'd be happy to share it.
